Did You Know?

The U.S. is the largest producer of CO2, greenhouse gases that are linked to global warming. Between 1990 and 2005 our CO2 emissions have increased 20%, and they continue to go up.

The Green Energy Task Force of Westport did an energy audit of our town and found that each Westport resident, on average, adds 18 tons of greenhouse gases per year into the atmosphere.

Tons of Greenhouse Gas Per Person/Per Year

Be Part of the Solution!

There are simple things you can do to reduce your carbon footprint.

- Take the We Green Westport Pledge.
- Your efforts are extremely important. Your pledge to create a “green” lifestyle and a “Green Westport” will be recognized and applauded.
- Every small step each one of us takes adds up to big savings.
